# QuickSpecs

Overview

HP cable trays are designed to mount on top of the HP Rack 10000 Series and route cables orderly and efficiently. The three levels within the trays allow for routing power, data and fibre channel cables separately. Trays come in two sizes, for 600mm wide and 800mm wide cabinets, while the Adjustable Cable bridge, used to transfer cables from rack back to rack back across the datacenter 'hot' aisle, comes in a single size option. Cable egresses on the bottom of the tray coincide with the top cable egress on the Rack 10000 Series, while the side egresses on the tray permit exiting to the Adjustable Bridge. Covers for the cable egresses are provided standard.
