Check Point Series
Prosignia 200

ProLiant 1600

ProLiant 1850R

Compaq Prosignia and ProLiant
Firewall Servers are delivered
on specific configurations of
these servers.

Overview

Compaq provides its Authorized Resellers with tested, recommended configurations and part numbers for the Compaq Prosignia and ProLiant Firewall Servers.

Compaq markets its Prosignia and ProLiant Firewall Servers to customers as fully integrated firewall solutions. Compaq recommends that customers contact their Compaq Authorized Reseller to determine the configurations most appropriate for their environment. Recommended configurations are being provided only to Compaq Authorized Resellers to enable Resellers to more confidently help their customers to plan and deploy their security environments.

Description

The Compaq Prosignia and ProLiant Firewall Servers are a complete family of pre-tested solutions that provide secure protection of corporate networks and safe access to the Internet. Compaq Prosignia and ProLiant Firewall Servers – Check Point Series include industry-standard software from leading computing security vendors Check Point Software Technologies and Computer Associates (CA).

The Compaq Prosignia and ProLiant Firewall Servers–Check Point Series are available in three configurations:

- Designed for small/medium businesses or remote offices, Compaq Prosignia 200 Firewall Server with Check Point FireWall Internet Gateway/100 (100 users) provides firewall security at an affordable price.
- The Compaq ProLiant 1600 Firewall Server with Check Point FireWall Internet Gateway/250 (250 users) and Encryption Module (DES) is ideal for medium-sized businesses or enterprise remote offices requiring firewall security and future scalability.
- The Compaq ProLiant 1850R Firewall Server with Check Point Enterprise Encryption Center (unlimited users) offers larger enterprise customers proven security without sacrificing flexibility or scalability. It is rack-mountable; ideal for space-constrained data centers.

Compaq Prosignia and ProLiant Firewall Servers are Pre-tested for Performance and Compatibility

Compaq Prosignia and ProLiant Firewall Servers have been tested to enable the reliable and consistent performance of the server hardware, operating system and Internet security server software. Internet security server software includes Check Point FireWall-1 and (optionally) CA InocuLAN 4.0 for Windows NT.

Check Point FireWall-1

Check Point FireWall-1 is an enterprise security suite of products which combines Internet, intranet/extranet and remote user access control with authentication, encryption, network address translation and content screening services, to deliver an integrated solution that scales to meet the demands of organizations large and small. Based on Check Point's Stateful Inspection technology, FireWall-1 provides a high level of security, scalability and features a broad range of application support. The FireWall-1 product suite is unified by Check Point's OPSEC (Open Platform for Secure Enterprise Connectivity), a platform architecture that allows central integration, configuration and management of third-party security applications.

- Firewall Internet Gateway includes a single firewall module and an associated management console. To do encryption, the Encryption Module is required.
- Enterprise Encryption Center includes a single firewall module but also allows management for multiple security enforcement points that protect an unlimited number of users and encryption.

CA InocuLAN 4.0 for Windows NT (optional)

CA InocuLAN 4.0 is a server-based anti-virus solution for Windows NT networks offering extensive enterprise management and virus protection. Its features include:

- Real-time cure: immediate notification and cure of viruses, including macro viruses
- Periodic update to provide the latest virus protection
- Virus protection for Internet downloads and e-mail attachments

Built-in Management

All Compaq servers feature Compaq Insight Manager, a comprehensive management tool that facilitates greater application availability by monitoring the operation of Compaq servers and proactively notifying administrators of impending hardware failures. Compaq Insight Manager gives administrators real control through its intuitive visual interface, comprehensive fault and configuration management and industry-leading remote management. ProLiant servers also include the Integrated Remote Console, which allows out-of-band management capabilities such as remote console and remote reset, independent of the state of the operating system.
